**Details:**

The trend currently is for individuals to pursue multiple careers in their lifetime. This is being called as the new career paradigm where the need for continuous learning is increasing by leaps and bounds, and gigs are becoming popular. Modern research advocates a self discovery based approach rather than a prescription based approach for discovery. The key is to equip individuals to fend for themselves across the various pivots in their professional lives, and be able to make consciously considered career and skill building choices. This includes looking into the current and future job markets, considering one's own need for fulfillment, economic needs and work life balance.

While career planning has always been relevant, significant changes to the traditional career paradigm and the rise of the gig economy have now made this an essential life skill. The need is even more acute in developing economies (like India) which lack comprehensive, non proprietary tests and where career decisions traditionally have been taken based on the vocations, opinions and instincts of parents and mentors. These traditional models of career decision can no longer be carried on in the light of advancements in technology and rapid globalization. The need of the hour, thus, is a framework which provides accurate recommendations and also broadens an individuals worldview.

**Outcome:**

The students cleared their doubts by asking various questions regarding the confusions, they usually face while deciding their career. He motivated the students to be confident and communicative in life. Besides, hard work, time management and focus on the line opted are important aspects to be taken care of.

All the students were highly motivated and got to know about various opportunities after completing their graduation. It was a very informative day for the students.

The webinar was concluded by vote of thanks from an Organizing Secretary. He expressed special gratitude

to the entire IUAA members for their constant encouragement and support in conducting the Webinar.
