

**IFTM University, Moradabad**  
**Master of Science Programme**  
**M.Sc. (Zoology)-I Year (I Semester)**  
**MZOCC-101: Genetics and Cytogenetics**

**Objective:** The course is designed to revise basic concepts of Genetics and then move on to advanced concepts. Some key aspects include the mechanism of inheritance, gene structure and function, sex chromosomal and autosomal anomalies, aspects of human genetics, etc. will be covered. A strong emphasis will be laid on the modern tools and techniques used in genetics to inculcate skill, provide employability & entrepreneurial skills.

**Unit-1:** Mendel's laws and their chromosomal basis; extension of Mendel's principles: allelic variation and gene function- incomplete dominance and co-dominance, allelic series, testing gene mutations for allelism; gene action- from genotype to phenotype- penetrance and expressivity, gene interaction, epistasis, pleiotropy; nature of the gene and its functions: evolution of the concept of the gene, fine structure of gene (rII locus); methods of gene mapping: 3- point test cross in *Drosophila*, gene mapping in humans by linkage analysis in pedigrees for skill development. **(10 Sessions)**

**Unit-2:** Gene mutation and DNA repair: types of gene mutations, methods for detection of induced mutations, P-element insertional mutagenesis in *Drosophila*, DNA damage and repair; regulation of gene activity in *lac* and *trp* operons of *E. coli*, general introduction to gene regulation in eukaryotes at transcriptional and posttranscriptional levels, organization of a typical eukaryotic gene, transcription factors, enhancers and silencers, non-coding genes to develop skill. **(10 Sessions)**

**Unit-3:** Sex determination and dosage compensation: sex determination- in humans, *Drosophila* and other animals; dosage compensation of X-linked genes- hyper activation of X-linked gene in male *Drosophila*, inactivation of X-linked genes in female mammals for skill development. **(06 Sessions)**

**Unit-4:** human genetics- karyotype and nomenclature of metaphase chromosome bands; chromosome anomalies and diseases- chromosomal anomalies in malignancy (chronic myeloid leukemia, Burkitt's lymphoma, retinoblastoma and Wilms' tumor); genetic analysis of complex traits - complex pattern of inheritance, quantitative traits, threshold traits; human genome and mapping for skill development and employability. **(10 Sessions)**

**Unit-5:** Genetics and cancer: oncogenes- tumor inducing retroviruses and viral oncogenes; chromosome rearrangement and cancer; tumor suppressor genes- cellular roles of tumor suppressor genes, pRB, p53, pAPC, genetic pathways to cancer to development skill. **(06 Sessions)**

**Course Outcomes (COs):**

After successfully completing this course, the students will be able to:

**CO1:** Understand how DNA encodes genetic information and the function of mRNA and Trna for skill development

**CO2:** Apply the principles of Mendelian inheritance for better skill development.

**CO3:** Understand the cause and effect of alterations in chromosome number and structure for skill development.

**CO4:** To development skill Relate the conventional and molecular methods for gene manipulation in other biological systems.

**CO5:** Discuss and analyse the epigenetic modifications and imprinting and its role in diseases for skill development.

**PO-CO-Mapping (Please write 3, 2, 1 where ever required)****(Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	2	2	2	2	2	2	2	2	1	1	1
CO2	2	3	3	1	2	1	3	3	2	2	2	1
CO3	3	2	1	2	3	2	1	2	1	1	1	1
CO4	2	3	2	2	1	2	2	1	2	1	1	2
CO5	3	2	3	3	2	3	2	2	2	2	2	1

**CO-Curriculum Enrichment Mapping (Please write 3, 2, 1 where ever required)****(Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

	Skill Development	Employability	Entrepreneurship Development
CO1	2	2	3
CO2	2	3	2
CO3	1	2	1
CO4	2	3	2
CO5	2	2	1

**Suggested Literature:**

1. Principles of Genetics, Snustad and Simmons, (4th Ed. 2005), John Wiley & Sons, USA
2. Modern Genetic Analysis: Integrating Genes and Genomes, Griffiths, J.F., Gelbart, M., Lewontin, C. and Miller, W. H. Freeman and Company, New York, USA
3. Genetics, J. Russell, Benjamin-Cummings Publishing Company, San Francisco, California, USA

**IFTM University, Moradabad**  
**Master of Science Programme**  
**M.Sc. (Zoology)-I Year (I Semester)**  
**MZOCC-102: Principles of Gene Manipulation**

**Objective:** This course gives an insight into the direct manipulation of DNA to alter the characteristics of an organism in a particular way. It envisages concepts, mechanisms, biological designs, functions and evolutionary significance of genetic modification or manipulation in special organisms and also discusses the recent advance in recombinant DNA technology for better skilling of entrepreneurship .

**Unit-1:** Basic recombinant DNA techniques, cutting and joining DNA molecules, restriction modification systems, various enzymes used in recombinant DNA technology, application of recombinant DNA technology for better skill development. **(10 Sessions)**

**Unit-2:** Restriction maps and mapping techniques; nucleic acid probes, blotting techniques, DNA fingerprinting, footprinting, methyl interference assay. Polymerase chain reaction– methods and applications for skill development. **(8 Sessions)**

**Unit-3:** Basic biology of cloning vectors: plasmids, phages, single stranded DNA vectors, Cosmids and other advanced vectors. Gene cloning strategies: methods of transforming *E. coli* and other cells with rDNA; methods of selection and screening of transformed cells; construction of genomic and cDNA libraries; strategies of expressing cloned genes; phage display skill development and employability. **(10 Sessions)**

**Unit-4:** Principles of DNA sequencing, automated sequencing methods; synthesis of oligo- nucleotides, primer design; micro-arrays; confocal microscopy; changing genes- directed evolution, protein engineering in microbes for better skilling of entrepreneurship. **(8 Sessions)**

**Unit-5:** Manipulating genes in animals: gene transfer to animal cells, genetic manipulation of animals, transgenic technology, genetically modified organisms: gene knockouts, mouse disease models, gene silencing, gene therapy, somatic and germ- line therapy for employability. **(6 Sessions)**

**Course Outcomes:**

After successfully completing this course, the students will be able to:

**CO1:** Gain knowledge and skill in the fundamentals of biotechnology, interactions and interdependence of physiological and biochemical processes.

**CO2:** Get exposed to various processes used in industries to development skill.

**CO3:** Develop an understanding of the fundamental molecular tools and their applications of DNA modification and cloning for better skilling of entrepreneurship

**CO4:** Develop future course of their career development in higher education and research with a sound base for better skilling of entrepreneurship.

**CO5:** Apply their knowledge with problem solving approach to recommend strategies of genetic engineering for possible applications in Biotechnology and allied industry for better skilling of entrepreneurship.

**PO-CO-Mapping (Please write 3, 2, 1 where ever required)**

**(Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

Cos/Pos	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

**Note: Latest editions of all the suggested readings must be used.**

**IFTM University, Moradabad**  
**Master of Science Programme**  
**M.Sc. (Zoology)-I Year (I Semester)**  
**MZOCC-103: Mammalian Physiology & Metabolism**

**Objective:** The course deals with various physiological functions in mammals. It also gives an account of the metabolic/ biochemical pathways and the probable impact of environment on them. The course provides an insight into the structure and function of organ systems in humans and their involvement in body metabolism towards maintenance of homeostasis for skill development and employability.

**Unit-1:** Internal Transport and Gas Exchange – Systems of circulation, Peripheral circulation, Regulation of heart beat and blood pressure, Transport and exchange of gases, Neural and chemical regulation of respiration, Gas transfer in air and water, Gas exchangers, Circulatory and respiratory responses to extreme conditions, Acid –base balance, Regulation of body pH to develop skill. **(8 Sessions)**

**Unit-2:** Osmoregulation in aquatic and terrestrial environments, Kidney functions and diversity, Extra-renal osmoregulatory organs, Patterns of nitrogen excretion. Thermoregulation - Heat balance in animals, Adaptations to temperature extremes, torpor, Aestivation and hibernation, Counter current heat exchangers. Adaptations to Stress- basic concept of environmental stress, acclimation, acclimatization, avoidance and tolerance, stress and hormones skill development and employability. **(10 Sessions)**

**Unit-3:** Sensing the Environment- photoreception, chemoreception, mechanoreception, echolocation, Endogenous and exogenous biological rhythms, Chromatophores and bioluminescence. Feeding mechanisms and their control, effect of starvation. Muscle physiology – striated and smooth muscle, Adaptations of muscles for various activities, Neuronal control of muscle contraction, Electric organs for better skilling. **(8 Sessions)**

**Unit-4:** A broad outline of metabolic pathways and their linkage, metabolism of primary metabolites– monosaccharides, lipids, amino acids and nucleotides. Nature of enzymes – kinetics, physico – chemical characterization, regulation of enzyme activity. Metabolic basis of nutrition, metabolic basis of specialized tissue function, metabolic disorders, metabolic basis of diagnostics, metabolism and adaption with one example, regulation of metabolism at molecular, cellular and organismic levels, enzymes and receptors as drug targets for skill development. **(10 Sessions)**

**Unit-5:** Endocrinology: Classification of Hormones. General principles of Hormone action, Biosynthesis & secretion of hormones, Hormones & reproduction to develop skill. **(6 Sessions)**

**Course Outcomes:**

After successfully completing this course, the students will be able to:

**CO1:** Understand the physiology at cellular and system levels, the mechanism and regulation of breathing, oxygen consumption and determination of respiratory quotient for skill development.

**CO2:** Understand how mammalian body gets nutrition from different bio-molecules and the process of digestion and excretion for better skilling of entrepreneurship.

**CO3:** Understand the organization of nervous system and process of nerve conduction and the process of vision and hearing to develop skill.

**CO4:** Understand the process of muscle contraction for skill development.

**CO5:** Learn the determination of haemoglobin content, blood groups and blood pressure to inculcate skill, provide employability & entrepreneurial skills .

**PO-CO-Mapping (Please write 3, 2, 1 where ever required)****(Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

Cos/Pos	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

**IFTM University, Moradabad**  
**Master of Science Programme**  
**M.Sc. (Zoology)-I Year (I Semester)**  
**MZOCC-104: Structure & Function of Invertebrates**

**Objective:** The course would provide an insight to the learner about the existence of different life forms on the Earth, and appreciate the diversity of animal life. It will help the student to understand the features of Kingdom Animalia and systematic organization of the animals based on their structural and functional affinities skill development and employability.

**Unit-1: Protozoa:** Detailed classification (upto order); Locomotion, Reproduction and Parasitism with a brief account of the causative agents of the following disorders of human i.e. Kala-azar, diarrhea, sleeping sickness, malaria to develop skill. **(8 Sessions)**

**Unit-2: Porifera:** Detailed classification (upto order); canal system and their types and Skeleton in sponges for better skill. **(6 Sessions)**

**Unit-3: Coelentrata:** Detailed classification (upto order); Polymorphism in Siphonophores, coral reefs C types, theories of coral reef formation, distribution and its conservation for skill development.

**Minor Phyla:** Brief account and affinities of Rotifera, Acanthocephala, Sipunculoidea. **(8 Sessions)**

**Unit-4: Annelida:** Detailed classification (upto order); Morphology and type study of Leech. Adaptive radiation in Polycheata, Metamerism in Annelida skill development and employability.

**Mollusca:** Detailed classification (upto order); Torsion in Gastropoda. Pearl industry for better skilling of entrepreneurship. **(8 Sessions)**

**Unit-5: Arthropoda:** Detailed classification (upto order); Brief account and affinities of Onychophora, Parasitism in Crustacea, larval forms in crustacean, mouth parts of insects to inculcate skill, provide employability & entrepreneurial skills.

**Echinodermata:** Detailed classification (upto order); larval forms, water vascular system skill development. **(8 Sessions)**

**Course Outcomes:**

After successfully completing this course, the students will be able to :

**CO1:** Learn about the importance of systematics and taxonomy for better skilling.

**CO2:** Gain the knowledge of structural organization of animals to develop skill.

**CO3:** Appreciate the diversity of non-chordates living in varied habit and habitats skill development and employability.

**CO4:** Understand the classification of different phylum to develop skill.

**CO5:** Understand evolutionary history and relationships of different non-chordates through functional and structural affinities for skill development.

**PO-CO-Mapping (Please write 3, 2, 1 where ever required)**

**(Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

**Master of Science Programme**  
**M.Sc. (Zoology)-I Year (I Semester)**  
**MZOCC-151: Lab 1 based on MZOCC-101 & MZOCC-102**

**Objective:** This is the only laboratory course taught independently of lecture courses. It has full hands on approach to expose the students to modern techniques and methodologies. The diverse techniques from microscopy to spectroscopy, calorimetry, chromatography ELISA, tissue culture to cloning etc. are included to make the student well versed with these protocols and methods knowledge for better employability in industry.

**List of Experiments:**

**(20 Sessions)**

**A. Genetics and Cytogenetics:**

1. Study of mutant phenotypes of *Drosophila*.
2. Demonstration of law of segregation using *Drosophila* mutants.
3. Study of law of independent assortment.
4. Demonstration of sex- linkage by using white mutation of *Drosophila*.
5. Demonstration of dosage compensation in *Drosophila* males and females.

**B. Principles of Gene Manipulation:**

1. Plasmid DNA isolation: mini-preparations.
2. Agarose gel electrophoresis of isolated plasmid.
3. DNA quantization and purity of DNA.
4. Restriction enzyme digestion of plasmid DNA.
5. Purification of DNA from an agarose gel.
6. Vector and insert ligation.
7. Preparation of competent cells and storage.
8. Transformation of *E. coli* with standard plasmids, calculation of transformation efficiency.

**Course Outcomes:**

After successfully completing this course, the students will be able to:

**CO1:** Understand the purpose of the technique, its proper use and possible modifications/ improvement skill development and employability.

**CO2:** Learn the theoretical basis of technique, its principle of working and its correct application for skill development.

**CO3:** Learn the construction repair and adjustment of any equipment required for a technique for entrepreneurship & employability.

**CO4:** Learn the accuracy of technique for better skilling of entrepreneurship.

**CO5:** Learn the maintenance laboratory equipment/ tools, safety hazards and precautions for better skill.

**CO6:** Understand the technique of cell and tissue culture for better skilling of entrepreneurship.

**CO7:** Learn the preparation of solution of given percentage and molarity for better skilling of entrepreneurship.

**CO8:** Understand the process of preparation of buffer. Learn the techniques of separation of amino acids, proteins and nucleic acids to develop skill.

**PO-CO-Mapping (Please write 3, 2, 1 where ever required)**

**IFTM University, Moradabad**  
**Master of Science Programme**  
**M.Sc. (Zoology)-I Year (I Semester)**  
**MZOCC-152: Lab 2 based on MZOCC-103 & MZOCC-104**

**Objective:** The main objective of this course is to aware the students about mammalian physiological processes and metabolism. The student will get better understanding of the concept studied by them in theory course and correlate with experimental observation for knowledge for better employability in industry.

**List of Experiments:**

**(20 Sessions)**

**A. Mammalian Physiology & Metabolism:**

1. Demonstration of tetany, action current and fatigue in muscle.
2. To study the effect of load on muscle contraction.
3. Titration of an amino acid, an acidic dye and an organic acid to determine the pKa value.
4. Preparation of a 'Good' buffer.
5. Estimation of a sugar, an amino acid, a vitamin, a nucleotide/nucleic acid by appropriate chemical and biological methods.
6. Kinetic characterization of any one enzyme.
7. Zymogram for any one enzyme.
8. Affinity chromatography using either a lectin or a textile dye.

**B. Structure & Function of Invertebrates**

1. To study the nervous system of Prawn, *Pila*
2. **Permanent mounting material**-Gemmules, Spicules, *Obelia*, *Hydra*, *Taenia scolex*, *Cyclops*, *Daphnia*, *Gammarus*, *Bugula*, Mouthparts - Cockroach, Mosquito, Housefly, Honeybee, Gill plate – *Pila*, *Unio*
3. **Spotting:**
  - a. Phylum Protozoa- *Paramecium*, *Euglena*, *Volvox*, *Noctiluca*, *Trypanosoma*, *Leishmania*, *Polystomella*, *Plasmodium*, *Opalina*, *Balantidium*, *Vorticella*, Conjugation in *Paramecium*
  - b. Phylum Porifera- *Leucosolenia*, *Euspongia*, *Euplectella*, *Hyalonema*, *Sypha*, *Clathrina*, *Grantia*, *Poterion*, *Cliona*, *Chalina*, *Halichondria*, *Ciona*, L.S. Sycon, T.S. Sycon, L.S. *Grantia*
  - c. Phylum Coelentrata- *Obelia* colony, *Obelia* medusa, *Hydra*, *Millipora*, *Diphyes*, *Physalia*, *Porpita*, *Aurelia*, *Tubipora*, *Alcyonium*, *Gorgonia*, *Pennatula*, *Metridium*, *Adamsia*, *Favia*, *Fungia*, *Madrepora*, *Meandrina*, *Hydra* W.M., *Hydra* L.S., *Hydra* T.S. of testis and ovary, *Tubularia*, *Sertularia*, *Companularia*, *Eudendrum*
  - d. Phylum Platyhelminthes- *Fasciola hepatica*, *Taenia solium*, *Planaria*, *Echinococcus*, *Fasciola* larva- Miracidium, Sporocyst, Redia, Cercaria, *Taenia*- Mature segment and Gravid segment,
  - e. Phylum Aschelminthes- *Ascaris lumbricoides*, *Ascaris*, T.S.- male and female
  - f. Phylum Annelida- *Nereis*, *Heteronereis*, *Pheretima*, *Polynoe*, *Eunice*, *Syllis*, *Aphrodite*, *Chaetopterus*, *Sabella*, *Arenicola*, *Amphitrite*, *Terebella*, *Serpula*, *Spirorbis*, *Pontobdella*, *Hirudenaria*, Earthworm T.S. through Pharynx, Gizzard, Typhlosolar region, *Nereis*-Parapodium
  - g. Phylum Arthropoda- Prawn, *Lepas*, *Balanus*, *Sacculina*, *Squilla*, *Astacus*, *Euparagus*, *Hippa*, *Carcinus*, *Scolopendra*, *Julus*, *Limulus*, *Gryllus*, Praying mantis, Dragon fly, *Nepa*, *Belostoma*, *Cicada*, *Gammarus*, *Cyclops*, *Daphnia*, *Lucifer*, *Mysis*, Zoea larva, Megalopa larva
  - h. Phylum Mollusca- *Pila*, *Mytilus*, *Chaetoderma*, *Chiton*, *Dentalium*, *Patella*, *Haliotis*, *Aplysia*, *Doris*, *Teredo*, *Octopus*, *Sepia*, *Loligo*, *Nautilus*, *Pecten*, *Pinctada*, *Unio*- Glochidium larva
  - i. Phylum Echinodermata- *Asterias*, *Antedon*, *Ophiothrix*, T.S. Arm- Starfish, Pedicellaria of starfish, Bipinnaria larva

j. Minor Phyla- *Bugula*

**Course Outcomes:**

After successfully completing this course, the students will be able to:

**CO1:** Understand the physiology at cellular and system levels for entrepreneurship & employability.

**CO2:** Understand evolutionary history and relationships of different non-chordates through functional and structural affinities for better skilling of entrepreneurship.

**PO-CO-Mapping (Please write 3, 2, 1 where ever required)**

**IFTM University, Moradabad**  
**Master of Science Programme**  
**M.Sc. (Zoology)-I Year (II Semester)**  
**MZOCC-201: Developmental Biology**

**Objective:** The course explains the sequence of events starting with a single cell to the production of a very complex organism. The course not only describes how embryos develop (embryology), but also highlights how the processes of development are brought about by changing individual cells into specialized cells with specific functions (the cellular level), and how genes within the genome of the organism drive and guide these changes (the molecular level). It also deals with a comparative account of development in some select groups of animals knowledge for better employability in industry.

**Unit-1:** History and basic concepts: the origin of developmental biology- cell theory, mosaic and regulative development, discovery of induction, genetics and development; basic concepts of developmental biology- cell division, cell differentiation, signaling, patterning; model systems: vertebrates model organism- *Xenopus laevis*, zebrafish; invertebrate model organism- *Drosophila melanogaster*, *Caenorhabditis elegans*; identification of developmental genes: spontaneous and induced mutation, mutant screening, developmental mutations in *Drosophila* to develop skill. **(8 Sessions)**

**Unit-2:** Structure of the gametes– the sperm, the egg; cleavage and gastrulation; axes and germ layers; morphogenesis– cell adhesion, cleavage and formation of blastula, gastrulation, neural tube formation, cell migration; Axis specification in *Drosophila*; origin of anterior- posterior and dorsal- ventral patterning- role of maternal genes, patterning of early embryo by zygotic genes; segmentation genes- the gap genes, the pair– rule genes, the segment polarity genes, the homeotic selector genes- bithorax and antennapedia complex skill development and employability. **(8 Sessions)**

**Unit-3:** General concepts of organogenesis: development of chick limb- eye, heart and brain; insect imaginal disc– determination of wing and leg imaginal discs, organizing center in patterning of the wing, butterfly wing development, the homeotic selector genes for segmental identity; insect compound eye– morphogenetic furrow, ommatidia, signaling, eyeless gene for skill development **(10 Sessions)**

**Unit-4:** Postembryonic development: growth- cell proliferation, growth hormones; aging- genes involved in alteration in timing of senescence; regeneration– epimorphic regeneration of amphibian (salamander) limb, requirement of nerves for the proliferation of blastema cells; embryonic stem cells and their applications for entrepreneurship & employability. **(8 Sessions)**

**Unit-5:** Medical implications of developmental biology: genetic errors of human development- the nature of human syndromes– pleiotropy, genetic heterogeneity, phenotypic variability, mechanism of dominance; gene expression and human disease– inborn errors of nuclear RNA processing, inborn errors of translation; teratogenesis- environmental assaults on human development- teratogenic agents like alcohol, retinoic acid etc skill development and employability. **(6 Sessions)**

**Course Outcomes:**

After successfully completing this course, the students will be able to:

**CO1:** Develop critical understanding how a single-celled fertilized egg becomes an embryo and then a fully formed adult by going through three important processes of cell division, cell differentiation and morphogenesis skill development and employability.

**CO2:** Understand how developmental processes and gene functions within a particular tissue or organism can provide insight into functions of other tissues and organisms for entrepreneurship & employability..

**CO3:** Realize that very similar mechanisms are used in very diverse organisms; and development is controlled through molecular changes resulting in variation in the expression and function of gene networks for entrepreneurship & employability.

**CO4:** Understand how the field of developmental biology has changed since the beginning of the 19<sup>th</sup> century with different phases of developmental research predominating at different times to develop skill.

**CO5:** Examine the evolutionary history of the taxa based on developmental affinities and understand the relevance of developmental biology in medicine or its role in development of diseases for skill development.

**PO-CO-Mapping (Please write 3, 2, 1 where ever required)**

**(Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

**IFTM University, Moradabad**  
**Master of Science Programme**  
**M.Sc. (Zoology)-I Year (II Semester)**  
**MZOCC-202: Systematics, Biodiversity and Evolution**

**Objective:** The course provides information about the patterns and processes of evolution above the species level. Besides elaborating the process of speciation, it also categorically differentiates between the three methods of phylogenetic analysis *viz.*, evolutionary systematics, phonetics and cladistics knowledge for better employability in industry.

**Unit-1:** An overview of evolutionary biology, concept of organic evolution during pre- and post- Darwin era; evolution and molecular biology- a new synthesis; from molecules to life, life originated from RNA, introns as ancient component of genes to develop skill. **(5 Sessions)**

**Unit-2:** The universal common ancestor and tree of life, three domain concept of living kingdom; molecular phylogeny– history, terms, definition and limitations, construction of phylogenetic trees using molecular data, construction of phylogenetic trees by using 16S rRNA gene sequences and concept of speciation in bacteria for skill development. **(5 Sessions)**

**Unit-3:** Molecular divergence and molecular clocks and molecular drive; complication in inferring phylogenetic trees; origin and diversification of bacteria and archea; diversification of genomes; the nature of bacterial and archeal genomes; origin of genomes by horizontal gene transfer; role of plasmid, transposons, integrins and genomic islands in DNA transfer for better skill. **(8 Sessions)**

**Unit-4:** Origin and diversification of eukaryotes- origin of cells and first organisms; early fossilized cells; evolution of eukaryotic cell from prokaryotes- a case of symbiosis; evolution of eukaryotic genomes; gene duplication and divergence to develop skill. **(8 Sessions)**

**Unit-5:** Mode of speciation- factors responsible for speciation; tempo of evolution; Taxonomic hierarchy, binomial nomenclature, systematics- definition and role in biology, biological classification- theories and objectives, types of taxonomy, taxonomic diversity- definition and types, origination and extinction, rates of change in origination and extinction, causes of extinction, causes of differential rates of diversification, current status and future of biodiversity; human evolution- human evolutionary history; placing humans on tree of life; genomics and humanness; current issues in human evolution skill development and employability. **(10 Sessions)**

**Course Outcomes:**

After successfully completing this course, the students will be able to:

**CO1:** Understand the complexities of character coding to develop skill.

**CO2:** Understand the similarities and differences of different types of data skill development and employability.

**CO3:** Understand the uses and limitations of phylogenetic trees for skill development.

**CO4:** Appreciate the complexities and difficulties of various species concepts skill development and employability .

**CO5:** Gain a basic grasp on the rules and philosophy of nomenclature and Know about the steps required to do systematic for skill development.

**PO-CO-Mapping (Please write 3, 2, 1 where ever required)**

**(Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

**Note: Latest editions of all the suggested readings must be used.**

**IFTM University, Moradabad**  
**Master of Science Programme**  
**M.Sc. (Zoology)-I Year (II Semester)**  
**MZOCC-203: Immunology**

**Objective:** The immune system is incredibly complex. This course is hence designed to enable understanding the molecular and cellular basis of the development and function of the immune system and identification of its biological, clinical and therapeutic implications to inculcate skill, provide employability & entrepreneurial skills.

**Unit-1:** Overview of the immune system: components of the immune system, principles of innate and adaptive immunity, the recognition and effector mechanisms of the adaptive immunity- antigen and immunogenicity, clonal selection theory for entrepreneurship & employability. **(6 Sessions)**

**Unit-2:** Antigen recognition by immune cells: Adaptive immunity- antibody structure, antigen recognition by B lymphocytes, TCR, antigen recognition by T- cells, co- receptors, structure and function of MHC complex; generation of lymphocyte antigen receptors- generation of diversity in immunoglobulins, T- cell receptor gene rearrangement, structural variations in immunoglobulin constant regions for skill development. **(10 Sessions)**

**Unit-3:** Antigen processing and presentation to T lymphocytes- antigen presenting cells, generation of T- cell receptor ligand, and MHC restriction, role of CD1 in antigen presentation; Innate Immunity- pattern recognition in the innate immune system, role of TLRs in innate immune response, complement and innate immunity, induced innate response to infection skill development and employability. **(8 Sessions)**

**Unit-4:** Effector mechanisms and regulation of immune responses: Signaling through immune system receptors- antigen receptor structure and signaling pathways, other signaling pathways that contribute to lymphocyte behaviour; development and survival of lymphocytes- B lymphocyte development and survival, humoral immune response, T lymphocyte development and survival, production of effector T- cells, cytotoxic T- cell effector mechanisms; NK and NKT cell functions; mucosal immunity; immunological memory; regulation of immune response: cytokines and chemokines, complement system, leukocyte activation and migration, APC regulation of the immune response, T- cell mediated regulation of immune response, Immunological tolerance and energy understanding for entrepreneurial skill. **(8 Sessions)**

**Unit-5:** Immunity in health and disease: introduction to infectious disease, innate immunity to infection, adaptive immunity to infection, evasion of the immune response by pathogens; immunodeficiency diseases- inherited immunodeficiency diseases, acquired immune deficiency syndrome; allergy and hypersensitivity- IgE and allergic reactions, hypersensitivity diseases; autoimmunity- responses to selfantigens, transplant rejection- responses to allo-antigens; manipulation of immune responses, vaccines; evolution of immune system- evolution of innate immune system, evolution of adaptive immune system for skill development. **(10 Sessions)**

**Course Outcomes:**

After successfully completing this course, the students will be able to:

**CO1:** Describe the basic mechanisms, distinctions and functional interplay of innate and adaptive immunity to develop skill.

**CO2:** Relate to errors occurring during development leading to congenital disorders and human diseases for skill development.

**CO3:** The students will be able to identify the cellular and molecular basis of immune responsiveness to develop

skill.

**CO4:** Gain the knowledge i.e. how the innate and adaptive immune responses coordinate to fight invading Pathogens for better skill.

**CO5:** Learn about the cell signaling pathways and their mechanisms knowledge for better employability in industry.

**Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

**Note: Latest editions of all the suggested readings must be used.**

**IFTM University, Moradabad**  
**Master of Science Programme**  
**M.Sc. (Zoology)-I Year (II Semester)**  
**MZOCC-204: Animal Behavior and Chronobiology**

**Objective:** The course aims to explain the natural behaviour patterns, how the behaviour varies among individuals and species (wild, domestic, and captive), how current and past environments and ecology influence not only behaviour, but also the underlying gene- environment interactions that shape it skill development and employability.

**Unit-1:** Introduction - definition, historical out line, patterns of behaviour, objectives of behaviour, mechanism of behaviour, asking questions. Reflexes- reflex action, types of reflexes, reflex arch, characteristics of reflexes and complex behaviour. Orientation primary and secondary orientation; kinesis – orthokinesis, klinokinesis; taxis – different kinds of taxis; sun-compass orientation, dorsal- light reaction to develop skill. **(8 Sessions)**

**Unit-2:** Eusociality, social organization in honey bee, polyphenism and its neural control, flower recognition, displacement and translocation experiment, various type of communications, production of new queen and hive, swarming, honey bee as super organism. Fixed action pattern: mechanism, deprivation experiment, controversies. FAP- characteristics and evolutionary features. Learning and instincts: conditioning, habituation, sensitization, reasoning. Communication- chemical (pheromones), visual, light, audio for skill development. **(8 Sessions)**

**Unit-3:** Innate releasing mechanisms: key stimuli, stimulus filtering, super-normal stimuli, open and closed IRM, mimetic releaser, code breakers. Homeostasis and behaviour: motivational system, physiological basis of motivation, control of hunger drive in rat and thirst drive in goat, role of hormone, motivational conflict and decision making, displacement activity, models of motivation, measuring motivation. Hormones and pheromones influencing behaviour of animals, biological systems & Biological clocks for better skill. **(10 Sessions)**

**Unit- 4:** Adaptive functional significance of biological clocks. studying biological clocks; Biological Rhythms - Ultradian, Tidal/ Lunar, Circadian and Circannual rhythms; Temperature effects and compensation; Perception of natural zeitgeber signals; Organization of circadian system in multicellular animals; Concept of central and peripheral clock system; Circadian pacemaker system in invertebrates with particular reference to *Drosophila*; Circadian pacemaker system in vertebrates with particular reference to rodents; Supra-chiasmatic nucleus (SCN) as the main vertebrate clock; concept of core and shell skill development and employability. **(10 Sessions)**

**Unit- 5:** Photoreception and photo-transduction; The physiological clock and measurement of day length; Role of photic and non-photoc cues in seasonality; The relevance of biological clocks for human welfare - Clock function (dysfunction) to develop skill. **(6 Sessions)**

**Course Outcomes:**

After successfully completing this course, the students will be able to:

- CO1:** Learn a wide range of theoretical and practical techniques used to study animal behaviour to inculcate skill, provide employability & entrepreneurial skills.
- CO2:** Develop skills, concepts and experience to understand all aspects of animal behavior.
- CO3:** Objectively understand and evaluate information about animal behavior and ecology encountered in our daily lives to develop skill.
- CO4:** Understand and be able to objectively evaluate the role of Behavior in the protection and conservation of animals in the wild for skill development.
- CO5:** Consider and evaluate behavior of all animals, including humans, in the complex ecological world, including the urban environment for skill development.

**PO-CO-Mapping (Please write 3, 2, 1 where ever required)**

**(Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

**IFTM University, Moradabad**  
**Master of Science Programme**  
**M.Sc. (Zoology)-I Year (II Semester)**  
**MZOCC-251: Lab 1 based on MZOCC-201 and MZOCC-202**

**Objective:**

The course explains the basic principles and concepts underlying the developmental processes at the level. This will help the students to know the development process thoroughly. The course shall also make the students aware about the possible scopes of the subject which include research works to inculcate skill, provide employability & entrepreneurial skills.

**List of Experiments:**

**(20 Sessions)**

**A. Developmental Biology**

1. Study of life cycle of *Drosophila melanogaster*.
2. Study of embryogenesis in *Drosophila* and pattern of gene expression in embryogenesis by in situ hybridization technique.
3. Dissection and study of Grasshopper
4. Study of Homeotic gene mutations.
5. Chick Embryology: Demonstration of chick embryo of 18, 24, 28, 33, 36, 42, 72 hrs.

**B. Systematics, Biodiversity and Evolution**

1. Isolation of Genomic DNA from a bacterium and its quantification.
2. Designing primers for 16S rRNA gene sequence.
3. Amplification of 16S rRNA gene sequences by using genomic DNA as well as by colony boiling method.
4. Purification of 16S rRNA gene.
5. Sequence of 16S rRNA gene; editing the sequence, multiple alignments, construction of phylogenetic trees and interpretation of results.
6. Dot blot hybridization of different eubacterial species and interpretation of results.

**Course Outcomes:**

After successfully completing this course, the students will be able to:

**CO1:** Understand the developmental process effectively for better skilling of entrepreneurship.

**CO2:** Know about construction of phylogenetic tree to understand the evolutionary process skill development and employability.

**PO-CO-Mapping (Please write 3, 2, 1 where ever required)**

**(Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

**IFTM University, Moradabad**  
**Master of Science Programme**  
**M.Sc. (Zoology)-I Year (II Semester)**  
**MZOCC-252: Lab 2 based on MZOCC-203 and 204**

**Objective:** This course was designed to improve knowledge and understanding of the requirements of good laboratory practices which encompasses facility and equipment requirements, documentation requirements, roles and responsibilities and outsourcing services for better skilling of entrepreneurship.

**List of Experiments:**

**(20 Sessions)**

**A. Immunology:**

1. Dissection of primary and secondary immune organs from mice:
  - a. Preparation of single cell suspension from bone marrow and spleen (spleenocytes) of mice.
  - b. Cell counting and viability testing of the spleenocytes prepared.
2. Preparation and study of phagocytosis by splenic/peritoneal macrophages.
3. Raising polyclonal antibody in mice, serum collection and estimating antibody titre in serum by following methods:
  - a. Ouchterlony (double diffusion) assay for Antigen -antibody specificity and titre.
  - b. ELISA
4. Antibody purification from the serum collected from immunized mice: affinity purification/chromatography.
5. Immuno-electrophoresis.
6. Demonstration of Western blotting:
  - a. Protein estimation by Lowry's method /Bradford's method
  - b. SDS-PAGE.
  - c. Immunoblot analysis.
7. Blood group test.
8. Counting of R.B.Cs and W.B.Cs
9. Widal test

**B. Animal Behavior:**

1. To study the geotaxis behavior of earthworm.
2. To demonstrate the phenomenon of phototaxis in earthworm.
3. To demonstrate the phenomenon of phototaxis in housefly.
4. To demonstrate the phenomenon of chemotaxis in *Paramecium*.

**Course Outcomes:**

After successfully completing this course, the students will be able to:

**CO1:** Apply practical skills in science courses with the understanding of general laboratory practices

**CO2:** Use various micro techniques used in Zoology for better skilling of entrepreneurship.

**CO3:** Apply various techniques to study animal tissues for employability.

**CO4:** Explore various research issues and their solutions skilling of entrepreneurship.

**PO-CO-Mapping (Please write 3, 2, 1 where ever required)**

**(Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

**Note: Latest editions of all the suggested readings must be used.**

**IFTM University, Moradabad**  
**Master of Science Programme**  
**M.Sc. (Zoology)-II Year (III Semester)**  
**MZO-301: Principles of Ecology**

**Objective:** This course will take students on a journey through the physical workings of the Earth, the interactions between species and their environments. The course highlights on some of the important aspects *viz.* growth and survival of populations and communities in different habitats, energy flow in the ecosystems, interactions between the communities, exclusion of niches and consequences of changing environment on the biodiversity for entrepreneurship & employability.

**Unit-1:** Introduction to ecology, environmental concepts – laws and limiting factors, ecological models. Characteristics of population, population size and exponential growth, limits of population growth, population dynamics, life history pattern, fertility rate and age structure. Competition and coexistence, intra-specific and inter-specific interactions, scramble and contest competition model, mutualism and commensalism, prey-predator interactions, community structure and succession to develop skill. **(10 Sessions)**

**Unit-2:** Nature of ecosystem, production, food webs, energy flow through ecosystem, biogeochemical cycles, resilience of ecosystem, ecosystem management. The biosphere, biomes and impact of climate on biomes for skill development and employability. **(8 Sessions)**

**Unit-3:** Environmental Stresses and their management, global climatic pattern, global warming, atmospheric ozone, acid and nitrogen deposition, coping with climatic variations. Major classes of contaminants. Uptake, biotransformation, detoxification, elimination and accumulation of toxicants. Factors influencing bioaccumulation from food and trophic transfer. Pesticides and other chemical in agriculture, industry and hygiene and their disposal. Impact of chemicals on biodiversity of microbes, animals and plants. Bioindicator and biomarkers of environmental health. Biodegradation and bioremediation of chemicals for skill development. **(10 Sessions)**

**Unit-4:** Biodiversity – assessment, conservation and management, biodiversity act and related international conventions. Sustainable development, natural resource management in changing environment for skill development. **(8 Sessions)**

**Unit-5:** Molecular ecology, genetic analysis of single and multiple population, phylo-geography, molecular approach to behavioural ecology, conservation genetics to develop skill. **(4 Sessions)**

**Course Outcomes:**

After successfully completing this course, the students will be able to:

**CO1:** Know the evolutionary and functional basis of animal ecology for better skilling.

**CO2:** Understand what makes the scientific study of animal ecology a crucial and exciting knowledge for better employability in industry.

**CO3:** Engage in field-based research activities to understand well the theoretical aspects taught besides learning techniques for gathering data in the field to develop skill.

**CO4:** Analyse a biological problem, derive testable hypotheses and then design experiments and put the tests into practice skill development and employability.

**CO5:** Solve the environmental problems involving interaction of humans and natural systems at local or global Level for skill development.

**PO-CO-Mapping (Please write 3, 2, 1 where ever required)**

**(Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

**IFTM University, Moradabad**  
**Master of Science Programme**  
**M.Sc. (Zoology)-II Year (III Semester)**  
**MZO-302: Computational Biology, Biostatistics and Bioinformatics**

**Objective:** The course is aimed at introducing the application of bioinformatics and statistics in biology. The course gives an insight into the key concepts and methods used in bioinformatics; and computer storage, retrieval, analysis, visualization and distribution of information data related to biological macromolecules like DNA, RNA and proteins. It provides foundation on statistical methods to enable students to compute and interpret basic statistical parameters. As an interdisciplinary field it integrates biology, computer science, chemistry and statistics together sequence analysis structure analysis and functional analysis of biological data knowledge for better employability in industry.

**Unit-1:** Basic components of computers– hardware (CPU, input, output, storage devices), Software (operating systems), Application software; Introduction to MSEXCEL- use of worksheet to enter data, edit data, copy data, move data; Use of in- built statistical functions for computations of mean, S. D., correlation, regression coefficients etc., Use of bar diagram, histogram, scatter plots, etc., Graphical tools in EXCEL for presentation of data; Introduction to MS- WORD word processor- editing, copying, moving, formatting, table insertion, drawing flow charts etc; Introduction to Power Point, image and data handling to inculcate skill, provide employability & entrepreneurial skills. **(10 Sessions)**

**Unit-2: Biostatistics-** population, sample, variable, parameter, primary and secondary data, screening and representation of data, frequency distribution, tabulation, bar diagram, histograms, pie diagram, mean, median, mode, quartiles and percentiles, variance, standard deviation, coefficient of variation; Probability and distributions- definition of probability (frequency approach), independent events understanding for entrepreneurial skill. **(8 Sessions)**

**Unit-3** Addition and multiplication rules, conditional probability, examples- Bernoulli, binomial, Poisson and normal distributions; bivariate data- scatter plot, correlation coefficient  $r$ , properties (without proof), interpretation of  $r$ , linear regression: Fitting of lines of regression, regression coefficient, coefficient of determination; hypothesis, critical region, and error probabilities, tests for proportion, equality of proportions, equality of means of normal populations when variances known and when variances are unknown: chi-square test for independence, P- value of the statistic, confidence limits, introduction to one way and two- way analysis of variance for skill development and employability. **(8 Sessions)**

**Unit-4:** The era of computerized biology information, review of relevant definitions in molecular biology, overview of challenges of molecular biology computing, proteins, secondary structure and folding, RNA secondary structures, introduction to phylogenetic analysis; introduction to bioinformatics; introduction to genomics and proteomics databases- nucleic acid sequence database: Genbank, UCSC, ENSEMBL, EMBL, DDBJ, protein sequence databases: Swiss- prot, PDB, BLAST, PSI- BLAST (steps involved in use and interpretation of results) and HMMER, BLAST vs FASTA, file formats- FASTA, GCG and ClustalW to develop skill . **(10 Sessions)**

**Unit-5: Databank search-** data mining, data management and interpretation, multiple sequence alignment, genes, primer designing; Protein 3D modelling, protein structure analysis, docking, ligplot interactions, phylogenetic analysis with the program PHYLIP, DISTANCES, GROWTREE etc.; introduction to computational genomics and proteomics- basics of designing a microarray, image analysis and normalization, annotations, protein prediction tools- protein secondary structure, molecular 3D modelling, identification and characterization of protein mass fingerprint, world- wide biological databases, Introduction to programming languages such as “C” for skill development. **(06 Sessions)**

**Course Outcomes:**

After successfully completing this course, the students will be able to:

**CO1:** To gain the basic knowledge of computer for data interpretation and presentation to develop skill.

**CO2:** Describe statistical methods and probability distributions relevant for molecular biology data.

**CO3:** Know basic concepts of probability and statistics for skill development.

**CO4:** Know the theory behind fundamental bioinformatics analysis methods. Be familiar with widely used bioinformatics databases. Know the applications and limitations of different bioinformatics and statistical methods. Perform and interpret bioinformatics and statistical analyses with real molecular biology data. Acquire knowledge of various databases of proteins, nucleic acids. Primary, secondary and composite databases. BLAST, FASTA, DOT PLOT understanding for entrepreneurial skill.

**CO5:** Make phylogenetic predictions or prediction of structure of proteins and nucleic acids. Develop understanding in Primer designing. Understand data mining tool and its practical application in a case study. Apply the knowledge in future course of their career development in higher education and research skill development.

**PO-CO-Mapping (Please write 3, 2, 1 where ever required)**

**(Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

**IFTM University, Moradabad**  
**Master of Science Programme**  
**M.Sc. (Zoology)-II Year (III Semester)**  
**MZO-303: Structure and Function of Chordata**

**Objective:** The main objective of the course is to acquire knowledge on the animal classification based on characters. This will also help the students to study the comparative anatomy of various vertebrates to inculcate skill, provide employability & entrepreneurial skills.

**Unit-1:** Brief account of *Petromyzon* and *Myxine*, *Pyrosoma*, *Doliolum*, *Salpa* to develop skill. **(8 Sessions)**

**Unit-2:** Evolution and Phylogeny of fishes, fins and locomotion in fishes, air bladder and weberian ossicles of fishes for skill development. **(8 Sessions)**

**Unit-3:** Origin of Tetrapoda, origin and evolution of reptiles, temporal regions in reptiles and its role in classification, dinosaurs, palate in birds for better skilling. **(8 Sessions)**

**Unit-4:** Comparative Anatomy: Integument, digestive, respiratory, heart, brain, reproductive system, brain, skeleton (limbs and girdles). Animals to be studied: *Scoliodon*, *Varanus*, Fowl and Rabbit skill development and employability. **(12 Sessions)**

**Unit-5:** Origin & Evolution of Man, Prototheria & Metatheria, Dentition in Mammals, Aquatic Adaptations in Mammals skill development. **(6 Sessions)**

**Course Outcomes:**

After successfully completing this course, the students will be able to:

**CO1:** Understand the process of evolution through the comparative study of vertebrates to develop skill.

**CO2:** Study about diversity in animals making students understand about their distinguishing features for better skilling.

**CO3:** Understand different classes of chordates and level of organization skill development

**CO4:** Students understand the evolutionary relationship between different subphyla and classes, within and outside the phylum for skill development.

**CO5:** Gain the knowledge of origin and evolution of tetrapods to develop skill.

**PO-CO-Mapping (Please write 3, 2, 1 where ever required)**

**(Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

**Master of Science Programme**  
**M.Sc. (Zoology)-II Year (III Semester)**  
**MZO-304: General Endocrinology**

**Objective:** The course will provide the information on endocrine system with emphasis on the structure of hypothalamus and anterior pituitary. The associated hormones and the related disorders will be explained knowledge for better employability in industry.

**Unit-1:** Concept of endocrinology: introduction to the endocrine system. Phylogeny & Ontogeny of endocrine system to develop skill. **(4 Sessions)**

**Unit-2:** Comparative aspects of endocrine physiology in Mammals. Evolution of pituitary gland; Physiological actions of pituitary hormones. Urophysis and action of its hormone(s). Evolution of discrete adrenal gland; Synthesis of corticosteroid, structural diversity of glucocorticoids among vertebrates, role of glucocorticoid in gluconeogenesis for skill development. **(8 Sessions)**

**Unit-3:** Evolution of renin-angiotensin system, hormonal control of water and electrolyte balance; Catecholamine biosynthesis, its storage and release mechanism, physiological actions of adrenal medullary hormones; Importance of adrenocortical and adreno-medullary interaction to develop skill. **(8 Sessions)**

**Unit-4:** Evolution of thyroid gland. Thyroid hormone synthesis and its regulation, paradigms of thyroid hormone action in poikilotherms and homeotherms. A comparative account of parathyroid gland and ultimobranchial body/C cells, synthesis of parathyroid hormone, calcitonin and of vitamin D<sub>3</sub>; benthic organisms and source of vitamin D; hormonal regulation of calcium and phosphate homeostasis skill development. **(10 Sessions)**

**Unit-5:** Hormonal control of feeding behaviour and gastrointestinal tract functioning including acid release, gall bladder contraction and relaxation, pancreatic enzyme secretion, and GI tract motility; Pancreatic hormones and glucose homeostasis; hormones, vitellogenesis and the evolution of viviparity to develop skill. **(8 Sessions)**

**Course Outcomes:**

After successfully completing this course, the students will be able to:

**CO1:** Understand neuro-hormones and neuro-secretions for skill development.

**CO2:** Learn about hypothalamo and hypophysial axis for better skilling.

**CO3:** Understand about different endocrine glands and their disorders to develop skill.

**CO4:** Understand the mechanism of hormone action for employability.

**CO5:** Gain the knowledge of evolution of renin-angiotensin system and thyroid gland skill development and employability.

**PO-CO-Mapping (Please write 3, 2, 1 where ever required)**

**(Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

Cos/Pos	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

**IFTM University, Moradabad**  
**Master of Science Programme**  
**M.Sc. (Zoology)-II Year (III Semester)**  
**MZO-351: Lab 1 based on MZO-301 & MZO-302**

**Objective:** The primary aim of the syllabus is to sensitize the students about the paramount role and importance of nature. The study of Ecology imparts us the knowledge about the judicious use of existing ecological resources for sustainable development. This will provide a better knowledge to students about soil profile as well as ecological succession. Practical knowledge of computers and biostatistics will be helpful for students in their research work to inculcate skill, provide employability & entrepreneurial skills.

**List of Experiments:**

**(20 Sessions)**

**A. Principles of Ecology**

1. Physical and chemical characteristics of soil.
2. Assessing influence of light, temperature and moisture on plant germination and growth/animal behavior and growth.
3. Assessing influence of soil nutrient status on plant germination and growth.
4. Assessment of density, frequency and abundance of plants/animal in a community using various techniques i.e. transect, quadrat etc.
5. Comparison of stands/communities and ordination.
6. Profile diagrams.
7. Biomass and reproductive allocation under various environments.
8. Nutrient uptake and budget for various communities/Food chain assessment.
9. Decomposition of various organic matters and nutrient release mechanisms/role of arthropods and other micro-, and macrofauna in decomposition.
10. Understanding ecosystem succession by studying various stages of vegetation/community assemblages' development.
11. Molecular techniques in laboratory.
12. Insect diversity in soil.

**B. Computational Biology, Biostatistics and Bioinformatics**

1. Use of excel sheet for data processing.
2. Use of search engines like Scopus, Science direct for reference material collection and management.
3. Nucleic acid and protein sequence databases.
4. Data mining for sequence analysis.
5. Web– based tools for sequence searches and homology screening.
6. Primer designing for gene amplification and gene cloning.
7. Annotations: ORF finder, Use of ARTEMIS or any other suitable software.
8. Construction of phylogenetic trees for DNA and proteins.
9. Introduction to microarray technology.
10. Identification of peptide finger print by nano LC- MS/MS and database search using MASCOT and OMSSA.

**Course Outcomes:**

After successfully completing this course, the students will be able to:

**CO1:** Know basic concepts of probability and statistics for skill development.

**CO2:** Describe statistical methods and probability distributions relevant for molecular biology data for better skilling

**CO3:** Know the applications and limitations of different bioinformatics and statistical methods for better skilling of entrepreneurship.

**CO4:** Apply the basic operations of spreadsheet applications skill development

**CO5:** Operate various software resources with advanced functions and its open office substitutes knowledge for better employability in industry.

**PO-CO-Mapping (Please write 3, 2, 1 where ever required)**

**(Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

**IFTM University, Moradabad**  
**Master of Science Programme**  
**M.Sc. (Zoology)-II Year (III Semester)**  
**MZO-352: Lab 2 based on MZO-303 & MZO-304**

**Objective:** By this course the student will acquire knowledge on the animal classification based on characters. They may get the fundamentals knowledge on feeding, locomotion and other vital processes of vertebrates. Students will know the functioning of endocrine system for better skilling of entrepreneurship.

**List of Experiments:**

**(20 Sessions)**

**A. Structure and Function of Chordata**

1. Study of Museum specimens:
  - Cyclostomes:** *Petromyzon*, *Myxine*, Ammocoete larva of *Petromyzon*
  - Fishes:** *Echeneis*, *Tetradon* (Globe fish), *Stegostoma*, *Pterois*, *Anguilla*, *Diodon*, *Ostracion*, *Sphryna*, *Trygon* (Sting Ray), *Astrape* (Electric Ray), *Hippocampus*, *Pristis*, *Syngnathus*, *Acipensor*, *Anabas*.
  - Amphibia:** *Siren*, *Alytes*, *Axolotl* larva, *Rhacophorus*, *Bufo*, *Hyla*, *Ambystoma*, *Ichthyophis*, Salamander, *Pipa*
  - Reptiles:** *Draco*, *Gecko*, *Calotes*, *Ophiosaurus*, *Phrynosoma*, *Typhlops*, *Chameleon*, *Mabuia*, *Viper*, Tree snake, *Hydrophis*, *Krait*, *Crotalus*, *Dendrophis*, *Naja*
  - Mammal:** Squirrel, Bat. *Pangolin*, *Platypus*, *Echidna* Model
2. Study of slides:  
Whole mount: *Pyrosoma*, *Botryllus*, *Oikopleura*, *Doliolum*, *Salpa*
3. Study of Bones (Osteology):  
Appendicular and axial skeleton of Frog, *Varanus*, Fowl and Rabbit

**B. General Endocrinology**

1. Dissection of retro-cerebral complex (endocrine system) in insects (e.g., cockroach/any other insect).
2. Effect of hormone mimic on the metamorphosis and other bio-characteristics of lepidopteran insect (e.g., *Spodoptera litura*).
3. Dissection of endocrine system in crustaceans (neurohaemal organ).
4. Annelids (Earthworm brain/CNS) and molluscs (Brain/Optic glands in *Octopus*).
5. Pituitary cytology: a comparative study following histology, histochemistry and immunocytochemistry.
6. Adrenalectomy in rat.
7. Effect of adrenalectomy on glycogen assay.
8. Effect of metyrapone and saline administration on adrenal cortex following light microscopy.
9. Thyroidectomy in rats.
10. Effect of thyroidectomy and thyroid hormone replacement therapy on ecdysis and testicular functions in reptiles.
11. Steroid and thyroid hormone assay by ELISA
12. Calcium estimation following fluorometry in PTH/Calcitriol treated rats.
13. Effect of orexigenic and anorexigenic hormones on feeding behaviour of rats.
14. Induction of vitellogenesis in a seasonally breeding non-mammalian vertebrate.

**Course Outcomes:**

After successfully completing this course, the students will be able to:

**CO1:** Classify the animal species based on the morphological and anatomical features for skill development

**CO2:** Compare the functional morphology of vertebrates and invertebrates to develop skill.

**CO3:** Learn about hypothalamo and hypophysial axis for better skill.

**PO-CO-Mapping (Please write 3, 2, 1 where ever required)****(Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

**IFTM University, Moradabad**  
**Master of Science Programme**  
**M.Sc. (Zoology)-II Year (IV Semester)**  
**Stream I: Fish Biology**  
**MZO-401: Evolution and Functional Anatomy of Fish**

**Objective:** This course will provide an increased understanding of the evolutionary origins of the major fish taxonomic classes, genetic and environmental factors regulating reproduction in fishes. And various 'modes' of reproduction in fishes knowledge for better employability in industry.

**Unit-1:** Origin, diversity and distribution- origin and evolution of major groups of fishes, classification of fishes, bio geographical distribution, methods employed in phylogenetic studies and fish identification, fish barcoding. Air Bladder and Weberian ossicles of Fishes; Lateral line system, Identification of fresh water fishes for skill development. **(8 Sessions)**

**Unit-2:** Fish as a research model. Structure of Fins, median fin, caudal fins, paired fins, origin of paired fins, homeostasis- aquatic and aerial respiration, lymphoid organs, gas transport, Growth and age of Fish, various method for determining age and Growth in fishes to develop skill. **(8 Sessions)**

**Unit-3:** Sensory systems– photoreception, chemoreception, mechano-reception, electroreception. Adaptations to environmental extremes- temperature, pressure, stressors. Growth and metabolism- regulation of food intake by neuropeptides and hormones, Feeding habit of Teleost, Feeding intensity, method for food analysis, digestion and absorption of food for better skill. **(10 Sessions)**

**Unit-4:** Defence mechanism– integument and Immune system, development of immune system, cells and tissues of the fish immune system, modulators of fish immune responses, humoral and cell mediated immune defense, fish antibody molecules and their effector functions. Reproduction- reproductive strategies, environmental and endocrine factors regulating reproductive cycles, hormonal and molecular mechanisms of oogenesis, spermatogenesis, oocyte maturation and spermiation, fertilization, mechanism of sex determination, maternal factors in early development skill development. **(10 Sessions)**

**Unit-5:** Endocrines- piscine endocrine glands, Cell type and hormones of pituitary gland, neuroendocrine regulation of pituitary gland, osmoregulation, patterns of migration, orientation and homing, schooling, feeding, background adaptations, parental care its significance, nest building and other means of protecting eggs and young one to develop skill . **(8 Sessions)**

**Course Outcomes:**

After successfully completing this course, the students will be able to:

**CO1:** To obtain a thorough understanding of the production process of fish by products and future research for skill development.

**CO2:** Understand the origin and evolution of fish to develop skill

**CO3:** Learn the fish culture techniques to inculcate skill, provide employability & entrepreneurial skills..

**CO4:** Understand the anatomy and structure of fishes skill development

**CO5:** Learn about the endocrine and immune system of fish for better skill.

**Note: Latest editions of all the suggested readings must be used.**

**IFTM University, Moradabad**  
**Master of Science Programme**  
**M.Sc. (Zoology)-II Year (IV Semester)**  
**MZO-402: Aquatic Resources and Their Conservation**

**Objective:** The course deals with a knowledge of how abiotic factors influence adaptive capabilities in fishes, have greater insight into how growth is regulated in fishes, how conservation of fishes takes place and how pollution effect the health of the fish to inculcate skill, provide employability & entrepreneurial skills.

**Unit-1:** Riverine fisheries- important river systems and their hydrological conditions, flora and fauna with special reference to fisheries, dams and their impact on riverine fisheries, fish ladders, interlinking of rivers and likely impact on fisheries. Cold water fisheries – ecology of hill streams, biology of important cold water fishes of India, recreational fishing. Lakestrine fisheries – origin of lakes and lake morphology, light, temperature and density relationship in the lacustrine ecosystems, heat energy and water movements, oxygen and other dissolved gases in lakes, pH and redox potential, fisheries profile and potential of major Indian lakes knowledge for better employability in indust. **(10 Sessions)**

**Unit-2:** Estuarine fisheries- major estuarine systems of India, hydrography, flora and fauna with special reference to fisheries. Marine fisheries – coastal and deep sea fisheries, permanent and seasonal stratification, upwelling, the photic zone, control of primary production by light and nutrients availability, chemical properties of sea water, biology of important fishes (sardine, mackerel, tuna), marine protected areas. Integrated resources- coastal wet lands, mangroves, coral reefs, sea grasses and their conservation understanding for entrepreneurial skill. **(8 Sessions)**

**Unit-3:** Fishing techniques–technologies for localizing catches- remote sensing, sonar, radar; crafts and gears. Stock assessment and management–Natural markers- morphological analyses, environmental signals, genetic analyses; Applied markers- marking and tagging, Stock identification data analysis – stock composition analysis, age and growth, fecundity estimation, application of statistical methods in fisheries for better skilling of entrepreneurship. **(8 Sessions)**

**Unit-4:** Fish conservation- fishing laws and regulation, permitting. Postharvest technology–Fish spoilage, rigor mortis, rancidity, enzymatic spoilage, microbial spoilage; Fish preservation and processing- handling of fish at harvest/onboard, principles of fish preservations, methods of preservation, problems associated with fish preservations, quality control, fishery by-products for entrepreneurship & employability. **(8 Sessions)**

**Unit-5:** Aquatic pollution- types and sources, impact of pollution on aquatic organisms, ecosystem analysis- bio-indicators, bio-monitoring, environmental factors and fish health, Xenobiotics. Waste management- national and international standards. Extension services – basic principles and emerging issues of extension, role of information and communication technology in fisheries extension skill development and employability. **(10 Sessions)**

**Course Outcomes:**

**CO1:** To appreciate the economics of Fishery Biology to develop skill.

**CO2:** To gain thorough understanding of culture fisheries skill development

**CO3:** Lean the technologies for localizing catches- remote sensing, sonar, radar; crafts and gears to inculcate skill, provide employability & entrepreneurial skills.

**CO4:** Understand the methods of fish conservation for skill development

**CO5:** Lean about the impact of aquatic pollution on fish health knowledge for better employability in industry.

**PO-CO-Mapping (Please write 3, 2, 1 where ever required)****(Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

**IFTM University, Moradabad**  
**Master of Science Programme**  
**M.Sc. (Zoology)-II Year (IV Semester)**  
**MZO-403: Aquaculture**

**Objective:** Culture techniques of aquatic organisms from different aquatic resources (freshwater, estuarine and marine) are included in the fourth paper, Aquaculture. The environmental and nutritional requirements, reproduction and diseases of cultured species are the core parts of this paper. Various molecular techniques like transgenic fish production, genetic selection, hybridization, etc. are also included in this paper to inculcate skill, provide employability & entrepreneurial skills.

**Unit-1:** Culture technology– freshwater (carps, catfishes, murels, prawns), brackish water (Asian sea-bass, milk fish, mullets, crabs, shrimps), mari-culture (mussels, oysters, sea weeds), fish food organisms (algae; *Artemia*; zooplankton). Water Quality Requirements for Aquaculture- Role of temperature, pH, salinity, dissolved oxygen, ammonia, nitrite, nitrate, phosphate, Biological oxygen demand, Chemical oxygen demand for skill development.  
**(8 Sessions)**

**Unit-2:** Integrated farming – fish-cum-live tock farming, paddy-cum-fish farming, aquaculture engineering- aqua house, hatchery, ponds, race ways, recirculating system, cage, and pen. Fish seed technology – natural collection, bundh breeding, induced breeding, cryopreservation of gametes. Transport of finfish and shellfish- transport of eggs, fry, fingerlings and adults understanding for entrepreneurial skill.  
**(8 Sessions)**

**Unit-3:** Nutrition of aquatic animals – nutritional requirements of commercially important finfish and shellfish, dietary requirements of larvae and brooders, feed types, manufacture and ingredients, anti- nutritional factors in fish feed ingredients and their treatments, use of attractants and growth stimulants in fish feeds, alternative protein sources in aquaculture diets, feeding techniques, role of probiotics in nutrition. Setting up of display aquarium- freshwater and marine aquaria, selection of compatible species, breeding of aquarium fishes skill development and employability.  
**(8 Sessions)**

**Unit-4:** Role of genetics in aquaculture– gynogenesis, androgenesis, triploidy, tetraploidy, hybridization, sex reversal and breeding, production of transgenic fish, impact of GMOs on aquatic biodiversity. Fish health- infection and diseases in fish, common fish pathogens, routes of pathogen entry in fish, methods of colonization and spread of pathogens, immune – evasion mechanisms of fish pathogens for better skilling of entrepreneurship. **(8 Session)**

**Unit-5:** Environmental impact of aquaculture- aquacultural wastes and future developments in waste minimization, environmental consequences of hypernutrification. Fish vaccines-strategy and use in aquaculture understanding for entrepreneurial skill.  
**(6 Sessions)**

**Course Outcomes:**

- CO1:** To acquire knowledge on fish farming and breeding techniques knowledge for better employability in industry.
- CO2:** Gain more knowledge about fish by products and value added products for entrepreneurship & employability.
- CO3:** Disease diagnosis and treatment techniques entrepreneurship.
- CO4:** Understand the importance of genetics in aquaculture skill development and employability.
- CO5:** Learn about the fish vaccines strategies for skill development.

**PO-CO-Mapping (Please write 3, 2, 1 where ever required)****(Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

**IFTM University, Moradabad**  
**Master of Science Programme**  
**M.Sc. (Zoology)-II Year (IV Semester)**  
**MZO-451: Fish Biology Lab**

**Objective:** This course will help the students to be well acquainted with the fish morphology, anatomy and fish culturing techniques. This will enhance their knowledge and they would be able to identify finfish and shellfish. They will also gain the knowledge of fish Haematology and fish Immunology to inculcate skill, provide employability & entrepreneurial skills.

**List of Experiments:** (20 Sessions)

**A. Evolution and Functional Anatomy of Fish**

1. Phylogenetic analysis of bony fish: morphological analysis; mtDNA polymorphisms; comparison of protein sequences and construction of phylogenetic tree.
2. Display of visceral organs; preparation of fish skeleton; alizarine preparation.
3. Collection of body fluids (blood sampling; urine collection; gamete collection).
4. Study of various hematological parameters. Fish immune system – isolation of phagocytes and phagocytosis.
5. Comparative study of digestive enzymes of herbivore, carnivore and omnivore fishes;
6. Oxygen consumption in relation to body size/stress/anesthesia.
7. Extraction, isolation and characterization of plasma vitellogenin and egg-yolk proteins.
8. Surgical procedures (effect of hypophysectomy on osmoregulatory parameters; effect of gonadectomy on fish)
9. Visit to a fish market in Moradabad, identification of dominant finfish and documentation of shellfish.

**B. Aquatic Resources and Their Conservation**

1. Identification of Indian common fish faunal resources from cold water, warm water, brackish water, marine water and ornamental fishes.
2. Physico- chemical parameters of freshwater bodies.
3. Biological analysis of water and estimation of primary productivity.
4. Collection of phytoplankton and zooplankton from natural resources and their identification.
5. Study of benthic macroinvertebrates in natural water bodies.
6. Study of fishing gears and nets with the help of models.
7. Salinity tolerance in select fishes.
8. Determination of age and growth; gonadosomatic index.
9. Length-weight relationship and condition factor determination.
10. Experiments on chemoreception using different attractants and repellents.
11. Toxicity testing with zooplankton/fish.
12. Visit to a coastal/ mariculture farm and study the socio-economic status of the fisherman community.

**C. Aquaculture**

1. Estimation of hydrobiological parameters- temperature, pH, conductivity, salinity, dissolved oxygen, primary productivity, ammonia, nitrite, nitrate, phosphate, biological oxygen demand, chemical oxygen demand of nursery, rearing, stocking and breeding ponds.
2. Estimation of ovarian egg counts.
3. Culture of live food organisms and assay of nutritional quality of live food; estimation of population density of live food organisms.
4. Demonstration of breeding pools and hatcheries.
5. Induced breeding of Indian major carps and catfishes.
6. Identification of eggs, spawn, fry and fingerlings of cultivable fishes of India.
7. Collection and identification of aquatic weeds and aquatic insects.
8. Study of feeding habits of fishes by gut content analysis.
9. Aquarium design and maintenance.
10. Formulation and preparation of artificial fish food for Indian major carps and Prawns.
11. Analysis of proximate composition of fish and processed products.
12. Visit to freshwater/ marine fish farm.

**Course Outcomes:****CO1:** Learn the fish culture techniques for better skilling of entrepreneurship.**CO2:** To acquire knowledge on fish farming and breeding techniques knowledge for better employability in industry.**CO3:** Gain more knowledge about fish byproducts and value added product for entrepreneurship & employability.**CO4:** Disease diagnosis and treatment techniques for better skill.**PO-CO-Mapping (Please write 3, 2, 1 where ever required)****(Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

**IFTM University, Moradabad**  
**Master of Science Programme**  
**M.Sc. (Zoology)-II Year (IV Semester)**  
**Stream II: Cytology & Cytogenetics**  
**MZO-401 A: Extra Nuclear Cytology**

**Objective:** This course will help the students to be well acquainted with the membrane structure and composition, transport, the cytoskeleton and cell movement and by structure and function of various cell organelles. This will enhance their knowledge and they would be able to understand the functioning of cell. The general mechanism of cell division and their regulation through different check points will be thoroughly understood knowledge for better employability in industry.

**Unit-1:** Membrane structure and function: Structure of model membrane, lipid bi layer and membrane protein diffusion, osmosis, ion channels, active transport, membrane pumps, mechanism of sorting and regulation of intracellular transport, Electrical properties of membranes for skill development. **(8 Sessions)**

**Unit-2:** Mitochondria: Structure, assemblies of respiratory chain and F<sub>0</sub> F<sub>1</sub> – ATPase, Oxidative phosphorylation: mechanism and chemi-osmotic concept, Bioenergetics of ATP and other high energy phosphate compounds to develop skill. **(8 Sessions)**

**Unit-3:** Golgi bodies: Morphology, Ultrastructure, Cytochemistry, Function and Origin. Ribosomes: Physical characteristics and Structure, Stoichiometry and Biogenesis. Endoplasmic reticulum: Configuration of cytoplasmic membranes, Types of E.R .Granular and Agranular, Modification of agranular reticulum and Myeloid body. Lysosomes and related bodies: Morphology, Ultrastructure, chemistry and Origin of Lysosomes. Cytolysosome, Peroxisomes, Glyoxysomes and spherosomes for better skill. **(10 Sessions)**

**Unit-4:** Cytoskeleton, Microfilaments and microtubules – structure and dynamics, Microtubules and mitosis. Cilia and flagella, Cell movements – intracellular transport, role and kinesin and dynein, signal transduction mechanisms skill development. **(8 Sessions)**

**Unit-5:** Cell signaling: Hormones and their receptors, cell surface receptor, signaling through G-protein coupled receptors, signal transduction pathways, second messengers, regulation of signaling pathways, bacterial and plant two-component systems, light signaling in plants, bacterial chemotaxis and quorum sensing to develop skill. **(6 Sessions)**

**Course Outcomes:**

**CO1:** To understand the structures and purposes of basic components of prokaryotic and eukaryotic cells, especially macromolecules, membranes and organelles to develop skill.

**CO2:** Understand how mitochondria synthesize ATP skill development.

**CO3:** Gain the knowledge of formation of cytoskeleton and its functions for skill development.

**CO4:** Learn about the various pathways of cell signalling for better skilling of entrepreneurship.

**CO5:** To understand how these cellular components are used to generate and utilize energy in cell skill development and employability.

**PO-CO-Mapping (Please write 3, 2, 1 where ever required)****(Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

**IFTM University, Moradabad**  
**Master of Science Programme**  
**M.Sc. (Zoology)-II Year (IV Semester)**  
**MZO-402 A: Nuclear Cytology and Cytogenetics**

**Objective:** The course provides a detailed insight into basic concepts of sub cellular structure and function. It also gives an account of the complex regulatory mechanisms that control cell function knowledge for better employability in industry.

**Unit-1:** Nucleus: Morphology and significance, Nuclear matrix and organization of interphase nucleus. Nuclear membrane: Ultrastructure, Nuclear pore and Annuli, Chemical composition, Origin and biogenesis of ribosomes. Nuclear transport: Role of pore complex on nuclear sap. Nucleolus: Morphology, Ultrastructure, Chemistry and Function for skill development. **(8 Sessions)**

**Unit-2:** Structure of chromatin, heterochromatin, euchromatin, Sex Chromatin and Dosages compensation. Chromosomes: Ultrastructure, Physical and Chemical organization of chromosome. Giant Chromosome: Salivary and Lampbrush and their significance. Structural and numerical alterations of chromosomes: Deletion, duplication, inversion, translocation, ploidy and their genetic implications for better skill. **(8 Sessions)**

**Unit-3:** Chromosomal polymorphism: Inversion, Translocation, Fusion and Dissociation polymorphism, Adaptive significance of inversion polymorphism. Chromosomal rearrangements with special reference to insects and mammals to develop skill. **(8 Sessions)**

**Unit-4:** Cell division and cell cycle (Mitosis and meiosis, their regulation, steps in cell cycle, regulation and control of cell cycle). Extra chromosomal inheritance: Inheritance of Mitochondrial and chloroplast genes, maternal inheritance for skill development. **(8 Sessions)**

**Unit-5:** Chromosomal theory of Sex Determination: Simple and multiple system, Genic balance mechanism and Dominant Y System. Human sex anomalies, autosomal disorders, Cancer and Chromosomes. Cytological aspects of fertilization: Transportation of gametes, gametic union, nuclear fusion and fertilisation. Cytology of parthenogenesis: Haplo-diploidy, Thelytoky and cyclical Parthenogenesis for entrepreneurship & employability. **(8 Sessions)**

**Course Outcomes:**

**CO1:** Understand the fundamental structure and functions of biomolecules to develop skill.

**CO2:** Understand the functioning of nucleus and extra nuclear organelles and understand the intricate cellular mechanisms involved for better skilling of entrepreneurship.

**CO3:** Gain the knowledge of cell division and cell cycle for skill development.

**CO4:** Acquire the detailed knowledge of different pathways related to cell signaling and apoptosis thus enabling them to understand the anomalies in cancer skill development.

**CO5:** To acquire knowledge on the principles and practices of instrumental techniques skill development and employability

**PO-CO-Mapping (Please write 3, 2, 1 where ever required)****(Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

**IFTM University, Moradabad**  
**Master of Science Programme**  
**M.Sc. (Zoology)-II Year (IV Semester)**  
**MZO-403 A: Cytogenetical Techniques**

**Objective:** It has full hands on approach to expose the students to modern techniques and methodologies. The diverse techniques from microscopy to spectroscopy, ultracentrifugation, ELISA, tissue culture to cloning etc. are included to make the student well versed with these protocols and methods knowledge for better employability in industry.

**Unit-1:** Microscopic techniques: Visualization of cells and subcellular components by light microscopy, resolving powers of different microscopes, microscopy of living cells, scanning and transmission microscopes, different fixation and staining techniques for EM, freeze-etch and freeze- fracture methods for EM, image processing methods in microscopy understanding for entrepreneurial skill. **(8 Sessions)**

**Unit-2:** Histochemical and Immunotechniques: Antibody generation, Detection of molecules using ELISA, RIA, western blot, immunoprecipitation, fluocytometry and immunofluorescence microscopy, detection of molecules in living cells, in situ localization by techniques such as FISH and GISH for entrepreneurship & employability. **(8 Sessions)**

**Unit-3:** Fixation and staining techniques: Non –chemical and chemical fixatives, chemistry of staining of acidic and basic dyes. Tissue culture techniques: Monolayer suspension, leucocyte cultures, factors affecting cell growth *in vitro* skill development and employability. **(8 Sessions)**

**Unit-4:** Cell fractionation techniques: Principle of centrifugation and ultracentrifugation, different types of ultracentrifugation (in brief) and their applications, structural parts of an analytical ultracentrifuge, ultracentrifugation and buoyant density for better skilling of entrepreneurship. **(8 Sessions)**

**Unit-5:** Radioisotopes : Principles and applications of tracer techniques in biology, radiation dosimetry, radioactive isotopes and half-life of isotopes, liquid scintillation counter, principles and applications of autoradiography for entrepreneurship & employability. **(8 Sessions)**

After completing this course, the students will be able to

- CO1:** To acquire knowledge on the principles and practices of instrumental techniques to inculcate skill, provide employability & entrepreneurial skills.
- CO2:** Learn the construction repair and adjustment of any equipment required for a technique knowledge for better employability in industry.
- CO3:** Learn the accuracy of technique skill development and employability.
- CO4:** Understand the technique for the detection of molecules using ELISA, RIA, western blot, Immune-precipitation, fluocytometry and immunofluorescence microscopy for better skilling of entrepreneurship.
- CO5:** Learn the maintenance laboratory equipments/ tools, safety hazards and precautions understanding for entrepreneurial skill.

CO5	1	1	3	1	2	1	2	3	2	2	2	2

**CO-Curriculum Enrichment Mapping (Please write 3, 2, 1 where ever required)****(Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

	Skill Development	Employability	Entrepreneurship Development
CO1	3	2	2
CO2	2	3	3
CO3	3	2	3
CO4	3	3	2
CO5	2	2	3

**Suggested Readings:**

1. Anderson, Durston and Polle.1970. Thesis and Assignment writing. Wiley Eastern Ltd., New Delhi.
2. Comir and Peter Wood Ford.1979. Writing scientific papers in English. Pitman Medical Publishing Co., London.
3. Day, R.A. 1994. How to write and publish a scientific paper. Cambridge University Press, London.
4. Palanichamy, S. and M. Shanmugavelu.1997. Research methods in biological sciences. Palani Paramount Publications, Tamil Nadu, India.
5. Wilson and Walker. 2000. Practical biochemistry - principles and techniques. Cambridge University Press.
6. Milton, J.S. 1992. Statistical methods in Biological and Health Sciences. McGraw Hill Inc., New York.

**Note: Latest editions of all the suggested readings must be used.**

**IFTM University, Moradabad**  
**Master of Science Programme**  
**M.Sc. (Zoology)-II Year (IV Semester)**  
**MZO-451: A Cytogenetics Lab**

**Objective:** This is the only laboratory course taught independently of lecture courses. It has full hands on approach to expose the students to modern techniques and methodologies to inculcate skill, provide employability & entrepreneurial skills.

**Lists of Experiments:**

**(20 Sessions)**

**A. Extra Nuclear Cytology:**

1. Components and setting of the Compound microscope.
2. Cytological techniques for the demonstration of nucleus, chromosomes, mitochondria, Golgi bodies, ribosomes etc.
3. Sterilization of culture media by autoclave method
4. Sterilization of glassware by hot air oven
5. Preparation of stains and reagents for cytological examination.
6. Squash Preparation of onion root tip to demonstration of mitosis.
7. Cytochemical demonstration of Protein, Nucleic acid and Fat.
8. Preparation of feulgen stained chromosome in root tip cells.
9. Effect of colchicine on chromosome movements during mitosis.
10. Use of fluorescent dye to visualize cell components.
11. Fractionation of macromolecules from rat/mouse tissues

**B. Cytogenetics**

1. Preparation of chromosomes from Grasshopper for meiosis by squash method.
2. Temporary squash preparation of salivary gland chromosomes for the study of polytene chromosomes of larvae of *Chironomus/Drosophila*.
3. Study and preparation of metaphase karyotypes from photographs and permanent slides of *Drosophila*, grasshopper and man/rat.
4. Study of sex-chromatin Bar body from human buccal mucosa.
5. Demonstration of monohybrid and dihybrid cross with the help of beads.
6. Study of genetic disorders with the help of photographs and microscopic slides.
6. Study of permanent slides of polytene chromosomes, Lampbrush chromosomes, Sex Chromatin, metaphase chromosome, Anaphase chromosome, Grasshopper testes, Karyotype, Crossing over.

**C: Genetics**

1. Culturing of *E coli* on solid and liquid media
2. Demonstration of bacterial transformation using a suitable plasmid vector (with and without insert)
3. Handling of *Drosophila* and study of its life cycle
4. Examination of wild type (males and females) and mutants of *Drosophila*
5. Sex linked inheritance in *Drosophila melanogaster*
6. Linkage and crossing over in *Drosophila melanogaster*

**D. Cytogenetical Techniques:**

1. Study of different parts of binocular research microscope
2. Demonstration of Instruments - UV- VIS spectrophotometer, ultra-centrifugation, Microscopy.
3. Paraffin sectioning, Fixation of tissue blocks (e.g. intestine and stomach of rat or squirrel) Dehydration, clearing and embedding of tissue block in paraffin, Sectioning of paraffin blocks, stretching and spreading of sections on slides.
4. Histological staining of paraffin sections using haematoxylin and eosin method.
5. Estimations of fractionated molecules through spectrophotometric methods: Protein by Biuret/Folins method, DNA by diphenylamine method.
6. Demonstration of separation of subcellular organelles by differential centrifugation

7. Autoradiography detection of transcription in polytene chromosomes
8. Measurement of microscopic object using ocular and stage micrometers.
9. Separation of amino acids by paper chromatography
10. Preparation of various culture media and inoculation

**Course Outcomes:**

After completing this course, the students will be able to

**CO1:** Understand the process of preparation of buffer. Learn the techniques of separation of amino acids, proteins and nucleic acids knowledge for better employability in industry.

**CO2:** Understand the purpose of the technique, its proper use and possible modifications/ improvement understanding for entrepreneurial skill.

**CO3:** Learn the theoretical basis of technique, its principle of working and its correct application for better skilling of entrepreneurship.

**CO4:** Learn the construction repair and adjustment of any equipment required for a technique skill development and employability.

**PO-CO-Mapping (Please write 3, 2, 1 where ever required)**

**(Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
<b>CO1</b>	2	1	2	2	3	1	2	1	2	1	2	2
<b>CO2</b>	1	2	3	1	1	1	1	1	1	1	1	1
<b>CO3</b>	1	1	1	1	1	1	1	1	1	1	1	1
<b>CO4</b>	2	2	1	1	2	1	2	2	1	2	1	2

**CO-Curriculum Enrichment Mapping (Please write 3, 2, 1 where ever required)**

**(Note: 3 for highly mapped, 2 for medium mapped and 1 for low mapped)**

	Skill Development	Employability	Entrepreneurship Development
<b>CO1</b>	2	2	2
<b>CO2</b>	3	3	3
<b>CO3</b>	3	2	2
<b>CO4</b>	2	2	3

**Suggested Readings:**

1. Ewing, G.W. 1988. Instrumental methods of chemical analysis, McGraw Hill Book Compan
2. Daniel, M. 1989. Basic biophysics for biologists. Agro-Botanical Publishers, India.
3. Skoog, A., Douglas, J. and Leary, J.J. 1992. Principles of Instrumental Analysis. Sanders Golden Sunberst Series, Philadelphia.
