

This book is meant for helping researchers of Pharmacognosy, botany or plant sciences and the findings revealed methods for isolation of effective phytoconstituents and shows pathway for development of effective agent for treatment of Lice, male pattern baldness and male infertility. It also contain phytopharmacological literature review of G. glabra, A. precatarius and Z. mauritiana. The natural herbal extracts were used in the studies scientifically. The herbs Glycyrrhiza glabra, Abrus precatorius and Ziziphus mauritiana are called Keshya or hair growth promoter in ancient Indian Literature. So their efficacy was evaluated by conducting various experiments in wistar albino rats and the herbal extracts were also analysed for presence of various phytoconstituents.

Phytopharmacology of keshya herbs

Dr. Sukirti Upadhyay, the author of this book, has been working as an Assistant Professor at IFTM University, Moradabad, (UP), India for 8 years. She did PhD from Dr. A. P. J. Abdul Kalam Technical University, Lucknow, (UP), India. She had published sixteen research articles in various national and international journals.
