(57) Abstract :

LOGISTIC SUPPLY CHAIN MANAGEMENT: A CATALYST FOR SHAPING INDIA'S ECONOMIC GROWTH ABSTRACT A significant number of managers, expert professionals, and academicians in India have expressed a desire to address logistics and supply chain procedures at the national level. Supply Chain Management (SCM) practices in India have emerged as a result of this desire. This exploratory study is mostly focused on secondary data, facts, and figures that were recorded, as well as qualitative comments regarding the logistics infrastructure and supply chain processes. Collaboration and partnerships within the supply chain, the structure of the supply chain, the design of facilities networks, transportation and logistics, and the important role that information and communications technologies (ICT) play are the topics that are discussed here. The purpose of this section is to analyse and evaluate the current practices of supply chain management and logistics, as well as to identify developing trends and areas of concern. The purpose of this study is to provide an understanding of the extent to which companies and their supply chains in India have progressed in addressing major logistics and supply chain concerns, as well as the practices that they prioritise or should prioritise. In addition to this, we bring to light and discuss a few concerns that are associated with policy makers and supply chain managers.
